

EXPERIENCE

Staff Software Engineer
InsureMyTrip - 01/2016 - 01/2024
100 Commerce Drive, Warwick, RI 02886

- Served as the engineering team's voice with senior leadership – translating business goals into actionable engineering initiatives, providing estimates, and ensuring roadmap decisions stayed grounded in both technical feasibility and end-user impact.
- Owned end-to-end design and delivery of a post-sale policy update integration across multiple travel insurance APIs, proactively identifying data parity risks with stakeholders and SMEs during discovery, and eliminating a manual process that reduced customer resolution time from days to minutes.
- Built and maintained proprietary PHP package/library to interact with third-party service (Bridger, LexisNexis) to replace legacy system for flagging orders made by potential sanctioned individuals at point of sale. This improved accuracy identifying users and reduced time approving or denying orders.
- Coordinated PHP upgrades including refactors and performance improvements to code base, reducing bugs and improving site performance and time to quote travel insurance from 5-8 seconds down to 2 seconds or less.
- Championed a full quality ownership model, driving TDD/BDD adoption, resolving defects at the root cause level, and establishing testing standards that measurably reduced bugs and improved long-term maintainability.
- Owned ongoing website maintenance, delivering bug fixes, new page builds, styling improvements, and third-party integrations to support evolving business needs.
- Identified a recurring accuracy gap in insurance premium calculations affecting QA, dev, and finance. Built a Python CLI tool that generated plan-specific quoting permutations, reducing pricing defects and eliminating 80%+ of manual support and finance team interventions.
- Identified a pain point affecting both internal users and policy availability, thus designed and delivered a self-serve data-entry framework for non-engineers that cut insurance policy delivery time from months to roughly a week, while freeing up engineering capacity for higher-priority work.
- Designed, built, and drove adoption of GitLab CI/CD pipelines for automated testing, deployment, and rollback in AWS, aligning cross-team stakeholders on safe release practices and increasing deployment frequency from once every several days to multiple times daily.
- Trusted by the team as the final gatekeeper for critical deployments, conducting rigorous code reviews that upheld quality standards and consistently caught issues before they reached production.
- Architected and delivered a reusable VueJS SPA quote form, leading discovery with stakeholders to align on UX goals, validating decisions through A/B testing with Google Optimize, and improving user throughput to the quote results page by 30%, directly increasing policies sold.

Tech Lead
Precision Design Studios - 08/2014 - 12/2015
15 Park Row Ave, Suite 202 Providence, RI 02903

- Led workshops with clients on use of Demandware’s business manager interface.
- Led and implemented projected features, and integrate third party plugins for clients’ e-commerce websites.
- Provided estimates, solutions, and paired programmed with peers.
- Built and maintained websites in HTML, CSS, and Javascript as well as Demandware’s proprietary backend language.

Career Break
Jan 2024 – Present

- Intentional career break for personal reasons. Actively seeking new opportunities while learning new technologies and leveraging AI to expedite delivery of ideas into solutions.

SUMMARY

Full-stack Software Engineer with 8+ years of end-to-end ownership across insurance fintech APIs, payment systems, SaaS, and e-commerce. I take high-accountability approach to delivery and collaborating with stakeholders and SMEs to keep user needs in focus, catching risks before they become blockers, and shipping work that holds up in production. I have a track record of measurably improving team velocity, code quality, and operational efficiency.

SKILLS

Languages: PHP, Python, HTML, CSS, JavaScript, Typescript, Go
Frameworks/Methodologies: Flask, FastAPI, Vue, React, Symfony, PHPUnit, PyTest, Cypress, TailwindCSS, Agile (Scrum, Kanban)
Databases: DynamoDB, MariaDB, AuroraDB, PostgreSQL, MySQL, Redis

Tools: AWS services (API Gateway, CloudWatch, EC2, ECS, EventBridge, Lambda, S3, Secrets Manager), Elastic search, feature flag platforms (ConfigCat, LaunchDarkly), AI agents (Claude, Co-Pilot CLI), Docker, Git, GitLab/GitHub, monitoring tools (Grafana, SumoLogic), infrastructure automation (Terraform, Ansible), CMS platforms (WordPress, ProcessWire), Atlassian tools (Jira, Confluence), Figma

EDUCATION

Computer Science - Bachelor of Arts
Rhode Island College - 2014

- Received Departmental Honors in Computer Science
- Presented thesis at Nineteenth Annual Consortium for Computing Sciences in Northeastern Conference
- Thesis: [GRAPH-ENE: A Web-based Graphing Program for building and manipulating graphs](#)

General Studies - Associate of Arts
Community College of Rhode Island - 2011
